ACKNOWLEDGEMENTS

None of this work would have been possible without the help of my committee. Ken Dean provided the means for my study at the University of Alaska Fairbanks (UAF), as well as unconditional support and sage advice throughout my term. Jonathan Dehn's initial suggestion to address lava cooling with a comparison to our archived AVHRR data ultimately grew into this project, and his continued attention to the work was largely responsible for much of its success. Virgil Sharpton lent much of his expertise to answer my many inquiries, and always proved a challenging conversationalist in the process.

In addition to my committee, many others graciously assisted me in this project. Through countless email correspondences, Andrew Harris, University of Hawaii Manoa, provided invaluable help with many of the finer details of the project, as well as presenting me the opportunity to continue my graduate research after UAF. I also wish to thank Jim Gardner, UAF, for providing the impetus for the project with his Physical Volcanology class, as well as Kevin Engle at the Geophysical Institute for his competent administering of the AVHRR receiving station, and Grae Worster at the University of Cambridge for his lesson on internal convection. John Eichelberger opened up a number of opportunities for me through our work on Amchitka Island, and Jeff Freymueller was very accommodating of my fieldwork in Okmok caldera. Zhong Lu, United States Geological Survey, was especially helpful with my work on the digital elevation models of Okmok. Valuable field data were shared by Kenneth Papp and Doerte Mann, UAF. While working on her own thesis project in the caldera, Dela Grey, UAF, assisted me with thickness measurements at the 1997 Okmok flow. Additional helpful information was provided by Pavel Izbekov, UAF and Richard Moore, USGS, though they might not be aware of it.

I would be remiss if I failed to mention the support of my family for my study here in Alaska. Specifically, my parents Robert and Euphrosyne helped get me to and from New York, and even managed to visit me here at Frustration Trail. I am very grateful for the assistance provided by my sister Laurissa and brother-in-law Phil, who offered terrific
help with, again, travel between Alaska and New York. I should also mention the help provided by my sister Holly and brother-in-law Evan, as well as my brothers Chris and David.
