## Biographical Sketch

I earned my PhD in Marine Geology and Geophysics from the MIT-Woods Hole Joint Program in Oceanography in 1996, and have since served on the faculty of UC Davis (2000-2002) before holding my current faculty position at the University of Hawaii. My research emphasizes numerical modeling to understand the physical processes associated with convection and magma generation at oceanic hotspots, the interaction of faulting and magmatism at mid-ocean ridges, and the formation of accretionary prisms at subduction zones. I also analyze geophysical data to study the structure of the asthenosphere, lithosphere and crust.
