

The University of Hawai'i Sea Grant College Program is requesting your support!

Every day, its dedicated faculty and staff work collaboratively with communities throughout the state to transform Hawai'i's coastal communities into economically viable, attractive communities that enhance the environment, economy and culture. We envision these communities to be healthy and safe places for our residents to live, work and enjoy.

You can help us achieve our goal by providing a financial contribution today.

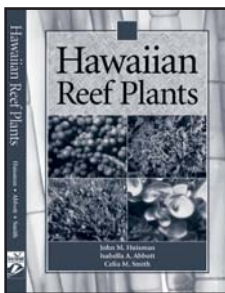

Whether you are a resident of Hawai'i or simply see the value in finding long-term solutions to the problems confronting our increasingly urbanized coast, you can rest assured your generous contribution will be used to identify important issues within the community and apply cutting-edge research, outreach and education toward finding a solution.

AS OUR THANK YOU:

- Contributions of \$100.00 - \$150.00* will entitle you to receive a free copy of our recently released publication *Hawaiian Reef Plants* by world-renowned marine botanists;
- Contributions of \$250.00* or more will entitle you to receive copies of both *Hawaiian Reef Plants* and *Reef and Shore Fishes of the Hawaiian Islands*.

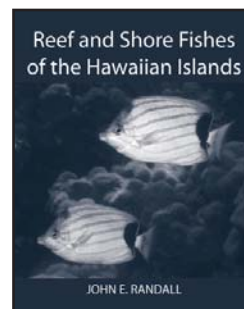

Both publications would make wonderful gifts for yourself or a loved one!

**Your contributions are partially tax deductible. Along with your free gift(s), UH Sea Grant will provide you with a receipt including the tax deductible portion of your total contribution. Please make your check or money order payable to UH Foundation. A self-addressed, stamped envelope has been enclosed for your convenience.*

Hawaiian Reef Plants concentrates on a significant part of Hawaiian marine life – marine plants, or seaweeds. It is beautifully written by John M.

Huisman, Isabella A. Abbott and Celia M. Smith, three of the world's leading marine botanists. Full color images and illustrations throughout, 264 pages. Taxonomic keys included.

Reef and Shore Fishes of the Hawaiian Islands is the latest book by award winning author John E. Randall and contains detailed

information on nearly all nearshore Hawaiian fish species. Full color images by the author throughout, 546 pages. Taxonomic keys included.

Please contact Cindy Knapman for more information:
