

Student Learning Objectives (SLO) of Required Courses for a Bachelor's degree in Geology & Geophysics

Student Learning Objectives (SLOs)

1. Students can explain the relevance of geology and geophysics to human needs, including those appropriate to Hawaii, and be able to discuss issues related to geology and its impact on society and planet Earth.
2. Students can apply technical knowledge of relevant computer applications, laboratory methods, field methods, and the supporting disciplines (math, physics, chemistry, biology) to solve real-world problems in geology and geophysics.
3. Students use the scientific method to define, critically analyze, and solve a problem in earth science.
4. Students can reconstruct, clearly and ethically, geological knowledge in both oral presentations and written reports.
5. Students can evaluate, interpret, and summarize the basic principles of geology and geophysics, including the fundamental tenets of the sub-disciplines, and their context in relationship to other core sciences, to explain complex phenomena in geology and geophysics.

Fill in each square according to the course objectives:

0=Negligible content of this topic/concept in the course

1=Introduce topics & concepts in order to provide awareness and instill curiosity, but there is negligible in-depth analysis or application.

2=Develop knowledge and capability through exploration, analysis, &/or application of topics & concepts.

3=Maturity—including proficiency, thorough knowledge, & good judgment—is achieved through in-depth exploration, analysis &/or application of topics/concepts.
