

ORE 330

**Mineral and Energy
Resources of the Sea**

Mining Technology

Deep-Sea Mining Systems

A. Manganese Nodule Systems

1. Tested systems

a) Robotic Miners

Design parameters

Pick-up systems

Airlift systems

b) Continuous Line Bucket

2. Untested systems

a) Submersible Shuttle System

B. Manganese Crust Mining System

Design Parameters

Crust thickness problem

Cutter depth optimization

Ripper design – fragmentation criteria

Air lift design

C. In-Situ Leach Mining Systems

Operations for manganese crust and harbor sediment cleanup

Single point mooring systems for leach mining

Adaptation for biomining

D. Polymetallic Sulfide Mining Systems Concepts

Mining System in General

Collector Vehicle Types :

Self - propelled

Towed

Tracked

Archimedes Screw

Sled

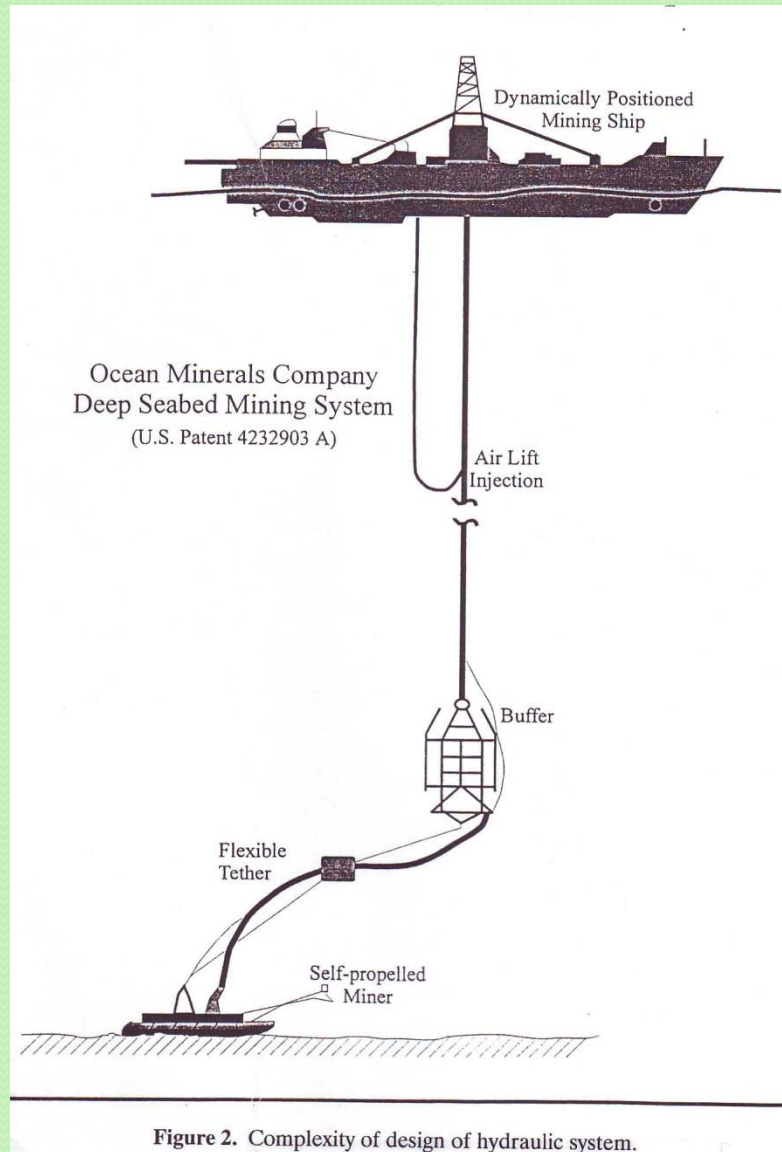

Figure 2. Complexity of design of hydraulic system.

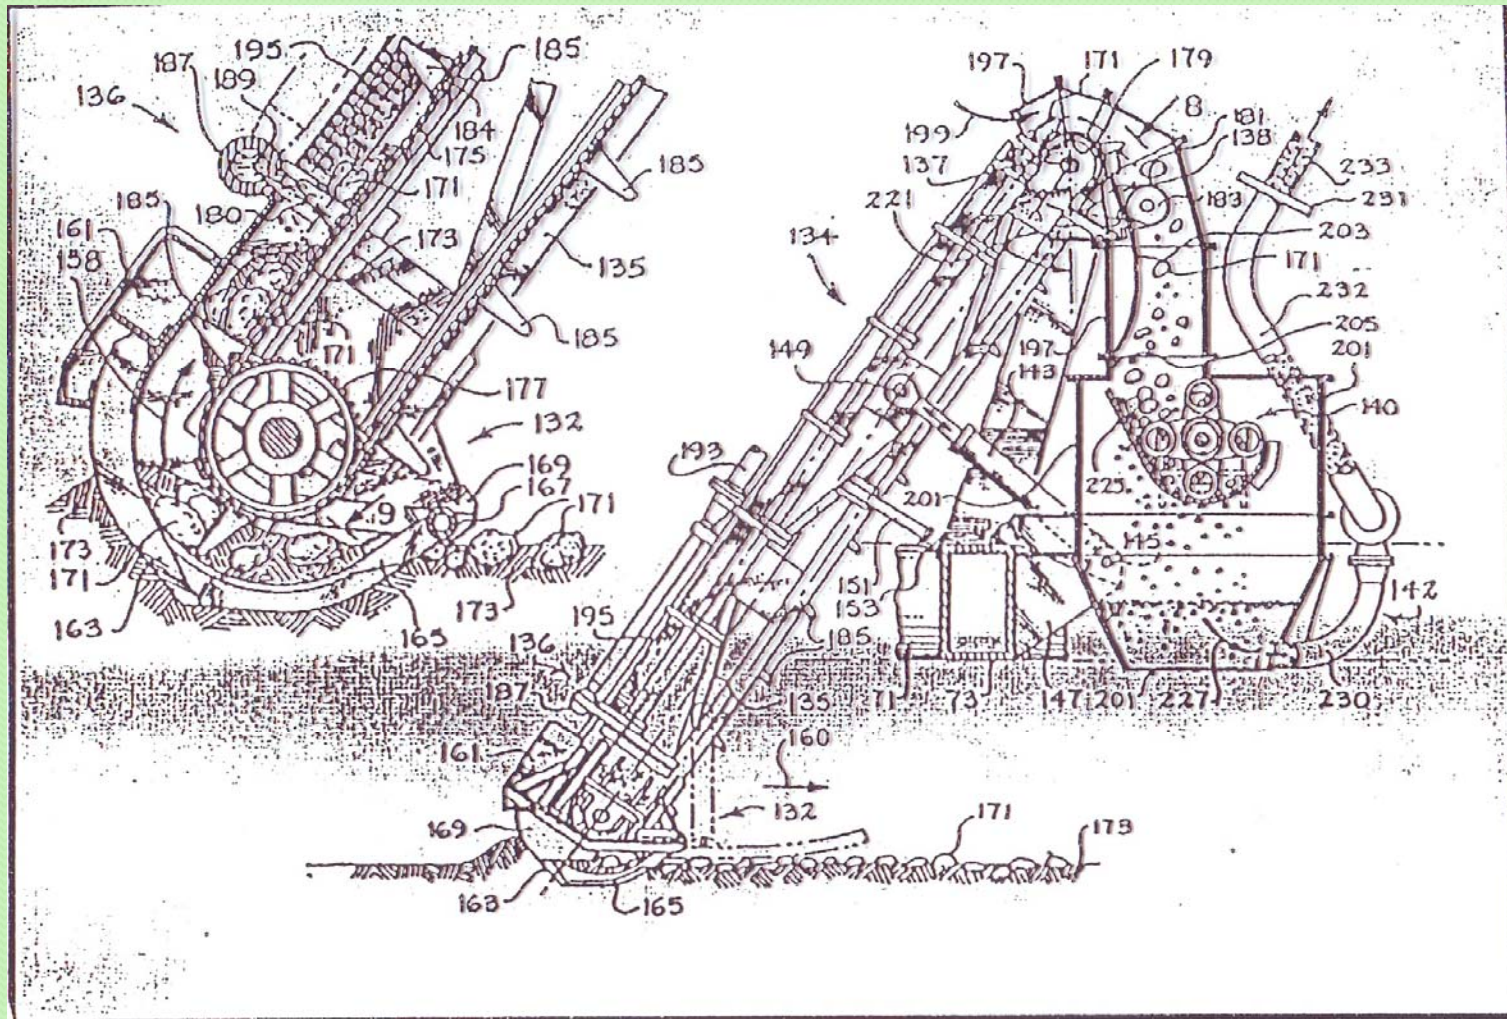

Figure 2.1.4 Various nodule pick-up principles. (from Thiel *et al.* 1991 redrawn from Bath 1989)

Ocean Minerals Company Nodule Pick-up System (from U.S. Patent 4232903 A)

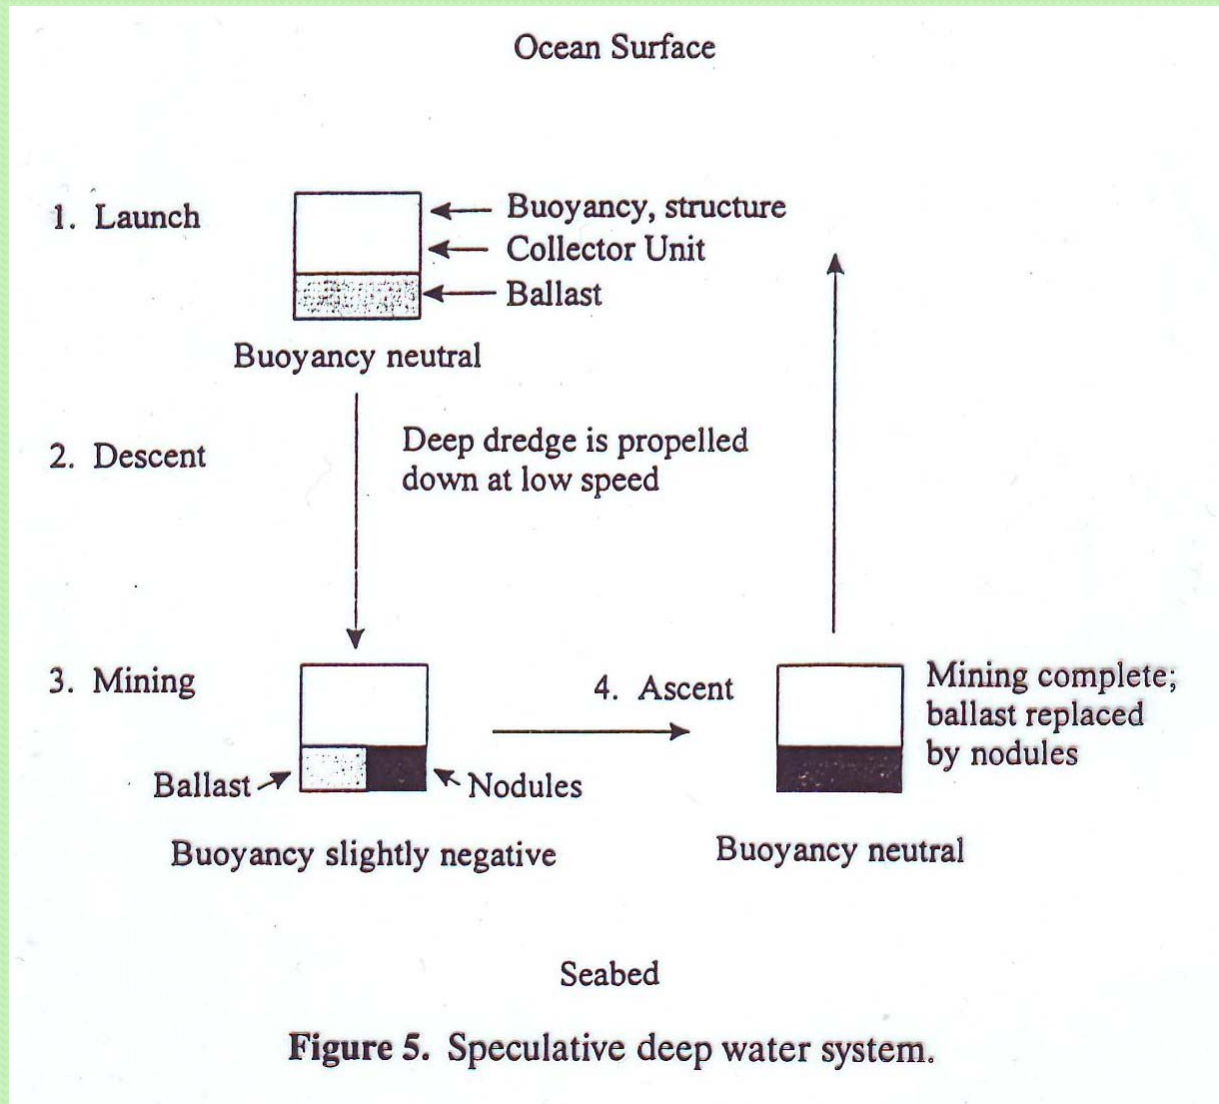

Figure 2.1.2 Continuous Line Bucket (CLB) mining system and the Preleveur Libre Autonome (PLA) or autonomous robot submersible shuttle system. (not to scale) (from Thiel *et al.* 1991)

Figure 3. Cutter head design for manganese crust miner (after Halkyard 1985).

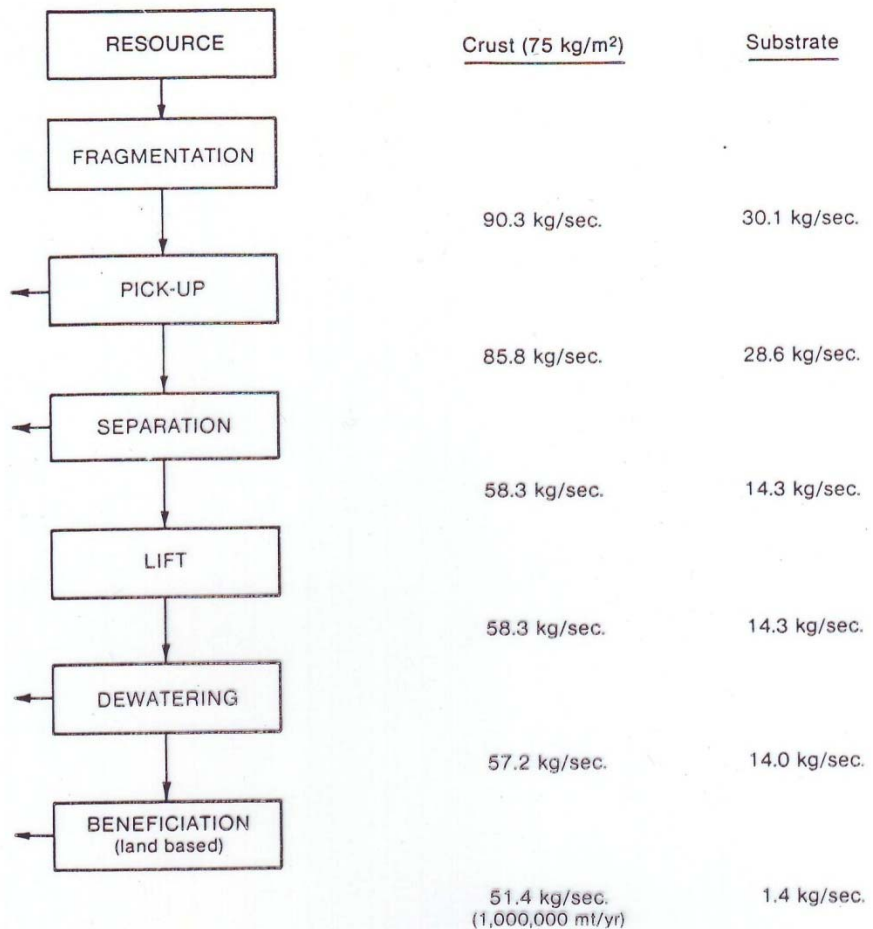

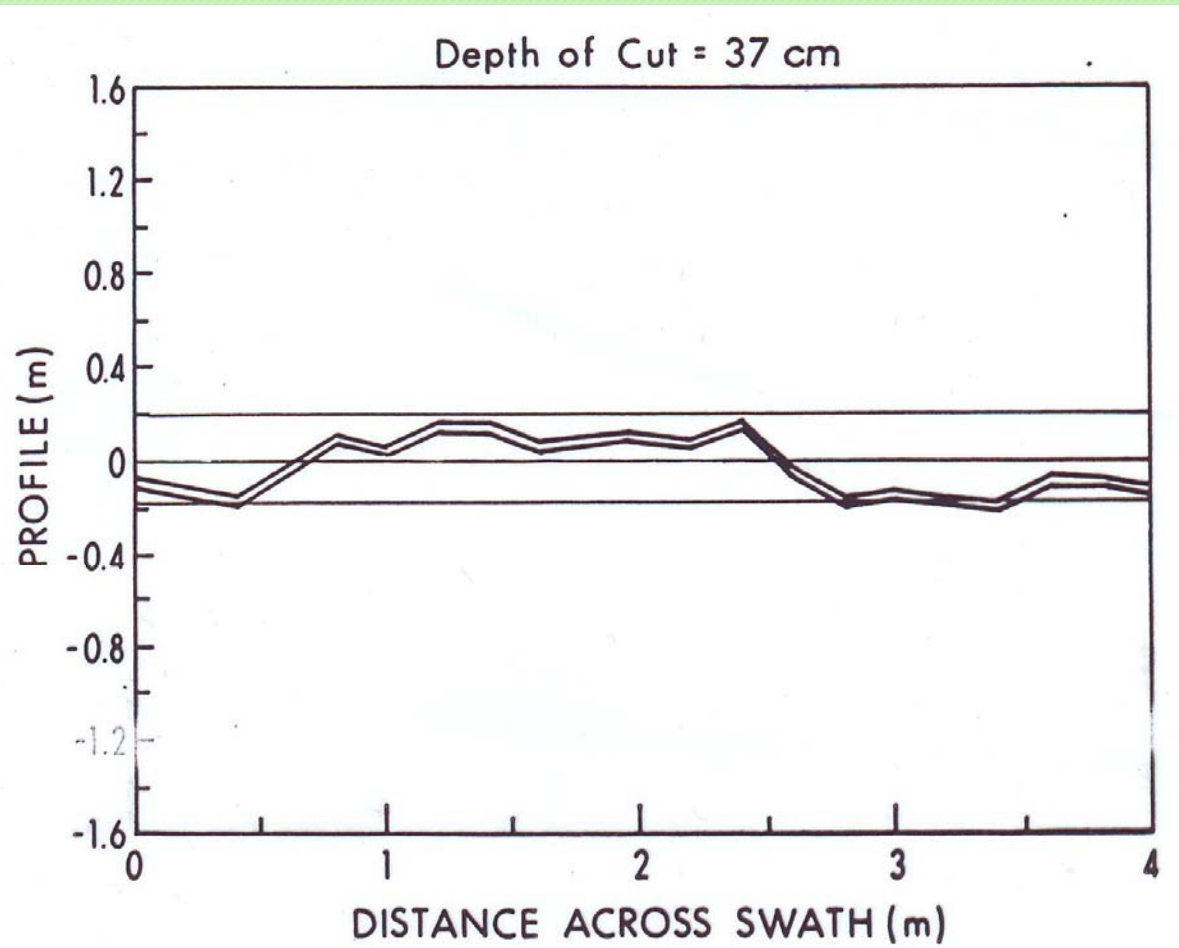

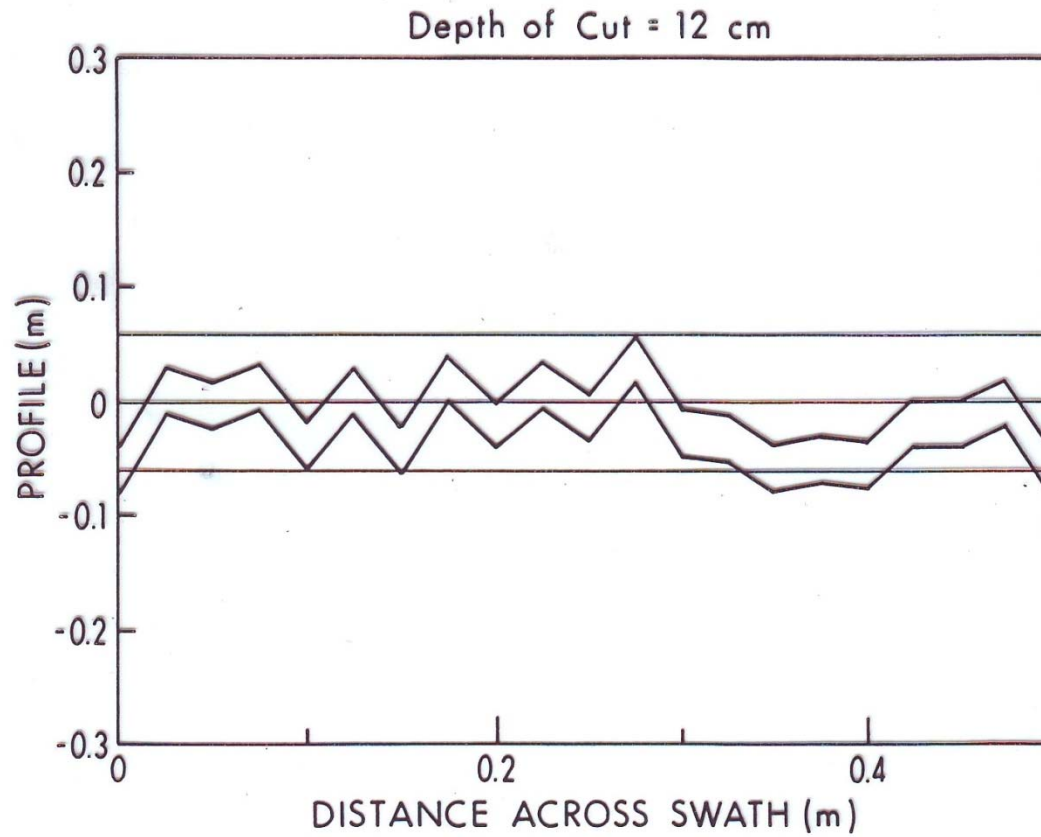

Figure 4-4. Base-case material flows (wet weight)

BASE-CASE MINING PARAMETERS
(25% Substrate in Recovered Ore)

Operation	Recovery Efficiency (%)
Crust Fragmentation	80
Pickup Crusts	95
Pickup Substrate	95
Separation @ 0.25 m/s	
Crust Recovery	63
Substrate	52
Shipboard Dewatering	
Crust	93
Substrate	93
Beneficiation	
Crust	90
Substrate	10

Example of "Level" Cutting Line (Example Profile Across 4.0-meter Swath).

Example of "Level" Cutting Line (Example Profile across 0.5-meter Swath).

 Tenement - Application

 Tenement - Granted

0 500 1,000 km

Plate Carree Projection. WGS84 Datum.

Mining system to be deployed by Nautilus Minerals

MINING SYSTEM

Mining Support Vessel (MSV)

Riser & Lifting System (RALS)

Seafloor Mining Tool (SMT)

Courtesy Nautilus Minerals

North Sea Shipping (Bergen, Norway) to provide a new 160m dynamic positioning Mining Support Vessel (MSV) on 5 year lease with an option for 5 more years

Seafloor Mining Tool (SMT)

Courtesy Nautilus Minerals and their technical alliance partner, Soil Machine Dynamics

2m

Technip (Houston) to build RALS using offshore oil technology and Soil Machine Dynamics (UK) to build two 6000 peak tpd SMTs
Mining to start in 2013
subject to timely
permitting by PNG

Extracting Value - Seafloor Mining Tools (SMTs)

- Soil Machine Dynamics (UK) contract to design and build
 - Experts in deep sea ROV and trenching machine design
 - US\$84 million contract for three specialized mining machines
 - Includes control systems and associated umbilicals, handling, and deck equipment
- Engineering has been underway for over two years
- Contract suspension released in March 2009

Auxiliary Miner– cuts ore on uneven surfaces; benching the site

Bulk Miner– cuts ore at high rates on areas benched by Auxiliary Miner

Gathering Machine – slurries cut ore with seawater and transfers to RALS

Existing Seafloor Trenching and Mining Equipment

RT-1 from SMT facility (contractor for Solwara 1 equipment)

Second generation 200 ton offshore diamond mining machine, DeBeers, Namibia
Courtesy Marine Minerals Pty

- 30+ years seafloor trenching for pipelines and communications
- De Beers 20+ years seafloor crawlers for diamond mining
- Utilizing cutting expertise from

Seafloor Resource Production System

Figure 19-5: Seafloor Resource Production System

"... in the ocean depths, there are mines of zinc, iron, silver and gold that would be quite easy to exploit"
