Pacific Islands Climate Science Center Inaugural Lecture

Navigating Change: Climate Science and Collaboration in the Pacific

Loyal Mehrhoff

US Fish and Wildlife Service

and

Deanna Spooner

Pacific Islands Climate Change Cooperative

October 26, 1:30pm - 3:00pm
Kuykendall Auditorium

The Pacific Islands Climate Science Center (PICSC) is a new collaborative initiative of the US Department of Interior, UH Mānoa, UH Hilo and the University of Guam. The PICSC is one of a network of 8 regional climate science centers recently established by the Department of Interior to serve the scientific needs of managers as they deal with wildlife habitats and ecosystems in a changing climate. The PICSC is pleased to present the first in a regular series of lectures at UHM discussing stakeholder-driven science related to Pacific climate change and ecology. This inaugural lecture will be preceded by a short description of the status and plans for the PICSC and of the opportunities it will provide for researchers at UH and its partner institutions.
