Hiring Science Interns

Undergraduate Students from the University of Hawaii System are sought to work during Summer 2011 with a team of Senior UH Manoa Oceanographers / Biologists / Geologists during a groundwater travel-time-to-ocean field experiment near Lahaina, Maui. Working in groups of two, successful applicants will participate and assist in the completion of this project by performing critical field measurements, testing, and routinely sampling coastal ocean waters. The Project Researchers will provide the training required.

We anticipate hiring an initial team of four to five Student Interns living on Maui to work full time (40hrs/week) from mid-June through mid-July, then needing two to three students to continue working full time from mid-July through mid-August, and finally, two students at half-time from mid-August through mid-October. We are flexible, so the final total number of students and total durations of weekly assignments may vary.

Qualifications: University of Hawaii System Undergraduate Students scheduled to enroll full-time for Fall 2011. Science majors seeking meaningful work experience are desired and emphasis on marine sciences is a plus. Must be good swimmer, very comfortable working in sun and in shallow coastal waters, have a valid driver’s license, and able to carry 40 lbs. weight. Friendly and dependable work etiquette is sought, and impeccable field notes will be a must!
