

## REFLECTION, REFRACTION, AND DIFFRACTION (31)

- I Main Topics
  - A Huygens' Principle
  - B Reflection
  - C Interference
  - D Refraction
  - E Diffraction

3/25/15

## II Huygen's Principle

- A Every point on a wave front is a source of spherical secondary wavelets
- B The new wave front is tangent to the secondary wavelet fronts
- C The points on a wavelet front are in phase

### III Reflection

- A Reflection: "to bend (bounce) back"
- B Angle of incidence = angle of reflection
- C Waves reflect better off vertical walls than gently sloped beaches

Consider wavefront AA' that advances to BB' and then to CC'.  
 Ray A'B'  $\perp$  to wavefront B'B because wavefronts are normal to rays  
 Ray B'C'  $\perp$  to wavefront C'C because wavefronts are normal to rays  
 (Ray B'C'  $\perp$  to wavefront C'C because CC' is tangent to Arc B)

$BC = B'C' = v\Delta t$ ;  $B'C = CB'$ ; and both  $\Delta BB'C$  and  $\Delta CC'B'$  are right triangles, so

$\Delta BB'C \sim \Delta CC'B'$ . So angle  $BB'C$  (i.e.,  $\alpha$ ) = angle  $CC'B'$  (i.e.,  $\beta$ ).

Now  $A'B' \perp BB'$ , and  $nB' \perp B'C$ , so  $\theta_i = \alpha$ .

Also,  $\alpha + \beta + \gamma = 90^\circ$ , and  $\alpha + \gamma + \theta_r = 90^\circ$ , so  $\theta_r = \beta$ .

Whereas  $\alpha = \beta$ ,  $\theta_i = \theta_r$ .

The angle of incidence = the angle of reflection.

### III Reflection

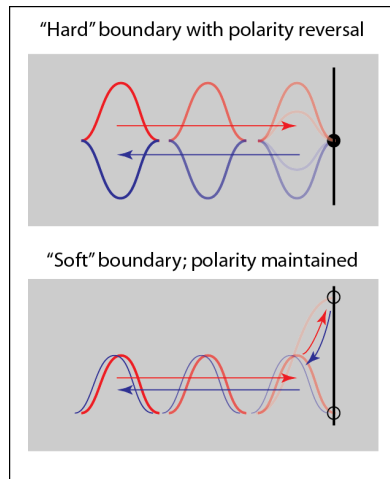

<https://www.youtube.com/watch?v=PevRZAxDxZw>

## III Reflection

D Polarity of reflected waves can change depending on conditions at the reflector

- 1 Polarity reverses at a "hard" boundary
- 2 Polarity is maintained at a "soft" boundary

6

## IV Interference

- A Based on superposition
- B The total amplitude of two waves at a point is the sum of the amplitudes of the individual waves
- C Constructive interference where total amplitude increases
- D Total destructive interference where total amplitude goes to zero

## V Refraction

- A Refraction: bending of a wave front
- B Snell's Law
- C Effect of water depth on wave speed
- D Wave fronts traveling into the slower region bend toward the normal of the fast-slow interface
- E Effects of refraction
  - 1 Waves become parallel to coast
  - 2 Waves concentrate on headlands
  - 3 Waves diverge in bays

## V Refraction: bending of a wavefront (Fraser River, Canada)
