

Sea Engineering's Specializations and Projects Throughout the Pacific

Chis Conger

Vice President of Sea Engineering
Director of firm's Engineering Division

Wednesday, November 22, 2023 at 3:30 pm - 4:30 pm

In person: BIL 150

On zoom: Meeting ID: 950 8185 8686

Passcode: OREseminar

Sea Engineering, Inc. (SEI) was founded in 1973 by University of Hawai'i graduate students to provide marine-related engineering, construction, and diving services locally and throughout the broader Pacific Basin. SEI, homebased in Hawai'i, has 50 years of experience working on coastal, marine, and waterfront projects in the Hawaiian Islands, as well as Guam, Diego Garcia, and CNMI. Our core services include geophysical surveys, oceanographic and environmental studies, coastal engineering, and both commercial and AAUS diving capabilities. Many of these specialized services combine our expertise in instrument deployment, diving, data processing, numerical analysis and modeling, sea level rise analysis, and site assessment and mapping. With the capability to quickly deploy a full suite of in-house instrumentation, our team routinely provides solutions that take projects from initial site investigation to final assessments.
