French Frigate Shoals Bathymetric Position Index (BPI) Structures are derived from two scales (20 and 250) of a focal mean analysis on bathymetry and slope to predict reef structures. Shelves are defined here as those at depths above -30m. Three ranges of slope define flats, slopes, and near vertical: $x < 5$; $5 < x < 70$; $x > 70$. See metadata for more information.
